

CURRICULUM VITAE - PHILIP L. JOHNSON

Supervising Engineering Geologist

COTTON, SHIRES AND ASSOCIATES
330 Village Lane
Los Gatos, CA 95030
Phone: (408) 354-5542, FAX (408) 354-1852
Email: pjohnson@cottonshires.com

Registration

Professional Geologist in California, PG 6196
Certified Engineering Geologist in California, EG 2019

Education

M.S., Geology: San Jose State University, San Jose, California, 1990
B.A., Geology: San Francisco State University, San Francisco, California, 1987

Representative Experience

Mr. Johnson has over 28 years of experience in the field of engineering geology, working on projects throughout California. He has been involved with numerous geologic investigations involving slope stability, faults, seismic hazards, sea bluff retreat, groundwater, expansive soil and bedrock, and other geotechnical issues. He also regularly participates in peer review for communities in the San Francisco Bay Area. He has a variety of areas of expertise including:

- Geologic characterization of landslides for design of mitigation measures. He has investigated numerous landslides ranging from large, deep-seated landslide complexes to shallow colluvial landslides and debris flows.
- Landslide mapping and interpretation of aerial imagery. He has mapped landslides in a wide variety of terrain utilizing field mapping and interpretation of aerial photographs, Lidar-based hillshades, and topographic maps.
- Subsurface investigation of landslides and faults utilizing downhole logging of large-diameter boreholes, core logging, and trench logging methods. He also regularly interprets slope inclinometer data for landslide and slope stability studies.
- Assessment of fault rupture hazard and seismic ground motions for large engineered structures as well as conventional site development. Projects include fault rupture hazard investigations on the San Andreas, Las Positas, Valley Side, and Hayward faults as well as the Foothills fault system in the Sierra Nevada range. Other investigations included trenching of thrust faults in the East Bay and on the San Francisco Peninsula. Many of these investigations involved both interpretation of landforms and fault trenching studies to evaluate fault rupture hazards.
- Engineering geologic aspects of surface mine reclamation with emphasis on stability of former mine slopes.

PHILIP L. JOHNSON (cont.)

- Investigation of geotechnical construction defects and building distress related to expansive soils, expansive claystone, fill settlement, incipient slope deformation, and landsliding.
- Engineering geologic investigation of dam sites. He was Project Geologist for two potential dam sites for East Bay Municipal Utility District. He also participated in a seismic hazard investigation of the Foothills fault system for the New Hogan Dam in the Sierra Nevada foothills. He also mapped the geology exposed during construction of a soft ground tunnel at Crystal Springs Reservoir.
- Fluvial sedimentology with particular emphasis on the use of detailed fluvial architecture to evaluate tectonic basin subsidence and basin history.
- Hydrostratigraphic investigations utilizing core samples, borehole geophysical, and hydrogeologic data.

Recent projects include landslide mapping, air photo interpretation, and downhole logging of large diameter borings for a landslide investigation in San Ramon; geologic investigation for design of landslide mitigation measures in Danville; fault rupture hazard investigations along the Hayward fault; and investigation of expansive bedrock in Contra Costa County.

Professional History

Supervising Engineering Geologist, 1995-Present; Cotton, Shires and Associates, Los Gatos, California.
Staff Geologist, 1992-1995; Dames & Moore, San Francisco, California.
Staff Geologist, 1990-1992; Earth Sciences Associates, Palo Alto, California.

Professional Affiliations

American Geophysical Union
Association of Environmental & Engineering Geologists
Geological Society of America
International Association of Sedimentologists
Rocky Mountain Association of Geologists
Society for Sedimentary Geology (SEPM)

Honors/Awards

GEOLOGICAL SOCIETY OF AMERICA, FELLOWSHIP, 2018.

GEOLOGICAL SOCIETY OF AMERICA, ENGINEERING GEOLOGY DIVISION, E. B. BURWELL AWARD, 2017.

ASSOCIATION OF ENVIRONMENTAL & ENGINEERING GEOLOGISTS, BEST PAPER OF THE YEAR AWARD, 2016, for the article "Geologic and geotechnical factors controlling incipient slope instability at a gravel quarry, Livermore Basin, California" in the journal *Environmental & Engineering Geoscience*.
